***Reasons for Allowance***

1. Claims 1-4 and 6-18 are allowed as the prior art does not teach the applicant's invention. Independent claim 1 teaches a tape drive apparatus. The distinguishing elements of the claim are: dew condensation on said rotary head drum is detected by rotating said rotary head drum during a state in which the tape is brought by said prethreading mechanism into contact with said rotary head drum, and wherein said prethreading mechanism has a folding two-stage arm, and wherein the tape is brought into contact with said rotary head drum by extending said two-stage arm.

Independent claim 9 teaches a tape drive apparatus. The distinguishing elements of the claim are: dew condensation of said rotary head drum is detected by rotating said rotary head drum during a state in which the tape is brought by said prethreading mechanism into contact with said rotary head drum, wherein dew condensation is detected from a change in tension of the tape.

Independent claim 15 teaches a tape drive apparatus. The distinguishing elements of the claim are: dew condensation on said rotary head drum is detected by rotating said rotary head drum during a state in which the tape is brought by said prethreading mechanism into contact with said rotary head drum, wherein the tape is detached from said rotary drum after the dew condensation on said rotary head is detected, and wherein drying of said rotary head drum is expedited by rotating said rotary head drum during a state in which the tape is detached from said rotary head drum.
